National Register of Historic Places Registration Form

DRAFT

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. **Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).**

Case Study House #16
Name of Property

Los Angeles, California
County and State

Narrative Description

(Describe the historic and current physical appearance of the property. Explain contributing and noncontributing resources if necessary. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, setting, size, and significant features.)

Summary Paragraph

This is the first of three residences that Ellwood designed for the program. A highly rational design, Case Study House #16 was built of steel, glass, and concrete. Ellwood was trained as an engineer and had a passion for using industrial materials and construction techniques in residential architecture. The interior walls are floating panels inset between steel posts. Translucent glass panels screen the house from the street. Frameless floor to ceiling glass walls in the living room merge with floors, ceilings, and a massive natural rock fireplace that extends through the glass to the covered patio. The property exhibits a high level of integrity.

Narrative Description

The one-story flat-roofed residence was built on a flat pad in the hills of Bel Air with magnificent views to the south and west. The layout and siting take into account the views and sun orientation, taking full advantage of both. Of steel frame construction, the house is 1750-square feet in size with a rectangular footprint. The dimensions of the house are 28 feet by 56 feet based on a four-foot modular rectangle. The walls were fashioned as floating screens of interchangeable panels that are recessed at their bases and separated from the ceiling by empty space or glazing.

From the street the house presents itself as a glowing, floating glass pavilion. A wall of frosted glass fronts the dwelling and encloses the interior courtyards that adjoin the bedrooms. The roofline cantilevers over exteriors of grooved fir siding. The main entrance is located just past a low brick wall, which separates the entry walkway from the carport. The roof appears to float above the carport, which sits on a concrete slab that extends to the street. Two wire-glass skylights illuminate the entryway. A second translucent glass wall at the back of the carport gives obscured views of the house and hints at the forms beyond, as well as unifying the street elevation. Interior detailing was aligned to practicality.

The interior walls and ceiling extend out onto exterior terraces, creating both a wide overhang and partitions for the exterior courtyards, further merging the inside with the outside. The large rear patio to the west reiterates the modular articulations of the house by being laid out in rectangular sections of concrete. There is an exterior fireplace made of Palo Verde stone that shares its chimney with the interior fireplace to anchor the southwest corner of the house. A second "viewing terrace" extends beyond the floor-to-ceiling glass doors of the living room along the south elevation.

The backyard area had many areas for play, and from the rear elevation you can see a low brick wall with custom designed built-in climbing bars that also act as a minimalist sculpture. This brick wall blocks the exterior yard from the service area and the interior courtyard.

The current owner, who bought the house a year after its construction, has maintained it with all of the original built-in furniture and appliances, replacing only the original sisal flooring of the interior, and covering the concrete floors of the outside terraces with a gray bisque tile that unifies the exterior and interior. In addition she has added vertical blinds inside of the sliding-glass doors, which were not

fitted with sunscreens, because additional shade was needed. With its simple planer geometry, clear structural massing and "floating planes" the house has as open spaciousness that welcomes the exterior environment and fits beautifully into the wooded hillside.

The publicly visible street facade is unaltered and the noted modifications relatively minor. As a result, the property maintains a high level of integrity of design, materials and workmanship. It is at its original location and the setting has been retained, and the property remains a single-family dwelling associated with the Case Study House Program. Because of these factors, integrity of feeling also remains high.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B Property is associated with the lives of persons significant in our past.
- ☒ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ A Owned by a religious institution or used for religious purposes.
- ☐ B removed from its original location.
- ☐ C a birthplace or grave.
- ☐ D a cemetery.
- ☐ E a reconstructed building, object, or structure.
- ☐ F a commemorative property.
- ☐ G less than 50 years old or achieving significance within the past 50 years.

Case Study House #16
Name of Property

Los Angeles, California
County and State

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance and applicable criteria.)

Case Study House #16 meets Criterion A for its association with experimental modern housing in the postwar years under the auspices of John Entenza's *Arts & Architecture* magazine. The property is also significant under Criterion C because it embodies the distinctive characteristics of residential architecture associated with the Case Study House program. In addition, CSH #16 was designed by master architect Craig Ellwood. Therefore, the property qualifies for listing under Criteria A and C at the local level of significance.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

Craig Ellwood, who had been a contractor and had no formal architectural training, designed this residence in 1952. It was the first of three he designed for the program. The residence was built as a display home and was ultimately sold to Muriel Norton who had just moved from New York City and had no previous experience with modern architecture. Located in the hills above Bel Air, the house orients out onto spectacular views that the dwelling's floor-to-ceiling glass walls take full advantage of. The house, with its geometric open floor plan, is a testament to indoor/outdoor open living in California. The property meets National Register Criterion A for its association with experimental modern housing in the postwar years under the auspices of John Entenza's *Arts & Architecture* magazine.

Case Study House #16 is a vital component of the Case Study House program due to its innovative use of exposed steel structural framing and the fact that it remains in pristine as-built condition to this day. The importance of the house, its significance within the program, and the work of its architect are thoroughly discussed within the historic context argument presented in the Multiple Property submission cover document. That historic context being, "Experimental Modern residential architecture of the Case Study House Program in California: 1945-1966." The house is a key example of the property type, "Single family residences of the Case Study House Program," and the "steel-frame dwelling" subtype. In addition, the property represents the work of master architect Craig Ellwood. As a result, the property meets National Register Criterion C because it embodies the distinctive characteristics of residential architecture associated with the Case Study House program and is the work of a master architect.

Developmental history/additional historic context information (if appropriate)
